

The economically priced SGJ provides linear position sensing over J1939 CANbus for OEM, mobile equipment and factory automation applications. Designed to withstand IP67 environments, the SGJ is constructed with a rugged polycarbonate body, an extremely durable spring-loaded stainless steel measuring cable and a stainless steel mounting bracket. For the OEM, customized options are available.

## Ordering Information:

### w/o terminating resistor

	<b>Part No.</b> <b>SGJ-80-4</b> 80-inch stroke range, no terminating resistor, 5-pin M12 mating plug, mounting bracket included	<b>Part No.</b> <b>SGJ-120-4</b> 120-inch stroke range, no terminating resistor, 5-pin M12 mating plug, mounting bracket included
--	--	--

### w/ terminating resistor

	<b>Part No.</b> <b>SGJ-80-4-TR</b> 80-inch stroke range, with terminating resistor, 5-pin M12 mating plug, mounting bracket.	<b>Part No.</b> <b>SGJ-120-4-TR</b> 80-inch stroke range, with terminating resistor, 5-pin M12 mating plug, mounting bracket.

## Cable Actuated Sensor Industrial • CANBus J1939

Two Available Stroke Ranges: 0-80 in & 0-120 in.

Rugged Polycarbonate Enclosure • Simple Installation

Compact Design • Built for IP67 environments

**IN STOCK FOR QUICK DELIVERY!**

### Specifications

<b>Stroke Range Options</b>	80 in. (2032 mm), 120 in. (3048 mm)
<b>Accuracy</b>	.5% FS.
<b>Repeatability</b>	.05% FS.
<b>Resolution</b>	12-bit
<b>Input Voltage</b>	10-36 VDC
<b>Input Current</b>	100 mA, max.
<b>Measuring Cable</b>	.019-inch dia. nylon-coated stainless steel
<b>Measuring Cable Tension, 80-inch</b>	14 oz. (3,9 N) ±30%
<b>Measuring Cable Tension, 120-inch</b>	9 oz. (2,5 N) ±30%
<b>Maximum Acceleration</b>	10 g
<b>Sensor</b>	plastic-hybrid precision potentiometer
<b>Cycle Life</b>	≥ 250,000
<b>Electrical Connection</b>	M12 connector (mating plug included)
<b>Enclosure</b>	glass-filled polycarbonate
<b>Environmental</b>	IP 67
<b>Operating Temperature</b>	-40° to 185° F (-40° to 85° C)
<b>Weight, 80-inch (not including bracket)</b>	.6 lbs (272 g)
<b>Weight, 120-inch (not including bracket)</b>	1 lb. (454 g)

### CANbus SPECIFICATIONS

<b>Communication Profile</b>	CANbus SAE J1939
<b>Protocol</b>	Proprietary B
<b>Node ID</b>	Adjustable via dipswitch (0-63), default set to 0
<b>Baud Rate Options</b>	125K (default), 250K, 500K, 1M
<b>Data Rate Options</b>	5ms (default), 20ms, 50ms, 100ms
<b>Termination Resistor</b>	See Ordering Information

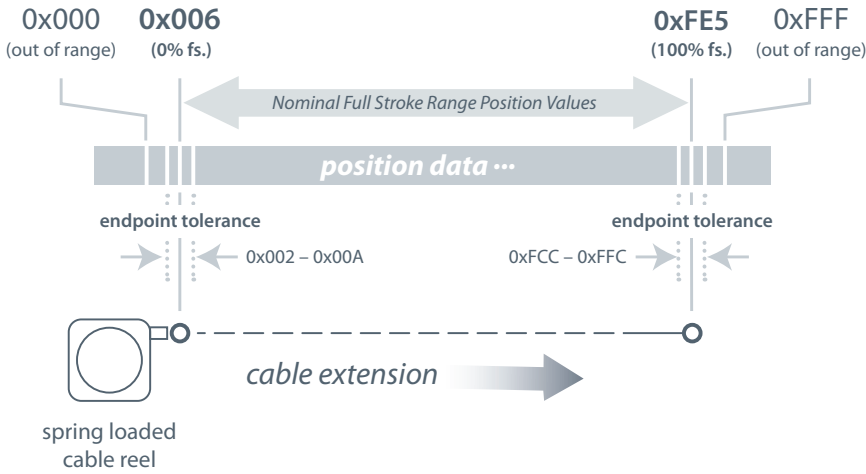

**Electrical Connection:**

signal	pin	pin-colorcode
n/c	1	1 - brown
10...36 Vdc	2	2 - white
common	3	3 - blue
CAN high	4	4 - black
CAN low	5	5 - green/yellow

**Position Data Overview:**

**Baud, Node ID and Data Rate:**

Baud Rate, Node ID and Data Rate settings are set via dip switch found on the internal controller board. To gain access to the controller board, remove the 4 cover attaching screws and carefully separate the sensor cover from the main body. Be careful not to damage the small gage wires that connect the potentiometer to the controller board mounted directly to the rear cover.

Follow the instructions below for desired settings and reinstall sensor cover.

BAUD rate options	baud rate		SW7	SW8
	125 kbps	off	off	off
250 kbps	on	off	off	
500 kbps	off	on	on	

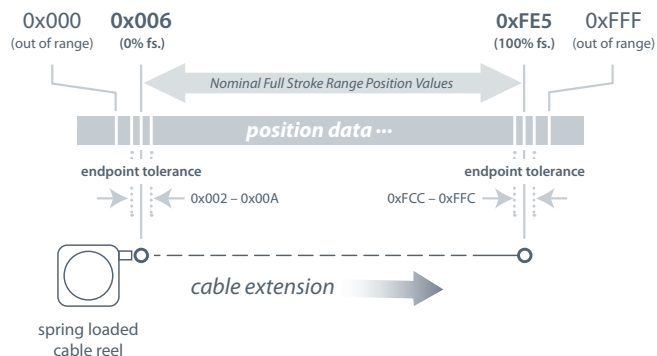

Data Rate options	Data Rate		SW9	SW10
	5 ms	off	off	off
20 ms	on	off	off	
50 ms	off	on	on	
100 ms	on	on	on	

node ID options 0-63 (0x00-0x3F)	node ID		SW1	SW2	SW3	SW4	SW5	SW6
	Dec.	Hex	(2 <sup>0</sup> )	(2 <sup>1</sup> )	(2 <sup>2</sup> )	(2 <sup>3</sup> )	(2 <sup>4</sup> )	(2 <sup>5</sup> )
0	0x00	off	off	off	off	off	off	off
1	0x01	on	off	off	off	off	off	off
2	0x02	off	on	off	off	off	off	off
3	0x03	on	on	off	off	off	off	off
...	...	...	...	...	...	...	...	...
62	0x3E	off	on	on	on	on	on	on
63	0x3F	on	on	on	on	on	on	on

Position Data Overview

Identifier:

	Message Priority	Future Use	J1939 Reference Proprietary B								Data Field Type*						Not Used		Node ID**											
Example	1	0	0	0	0	1	1	1	1	1	1	1	1	1	0	1	0	1	0	0	1	1	0	0	1	1	1	1	1	1
Identifier Bit No.	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0	
Hex Value	0				F				F				5			3			3		F									

\*Sensor field data can be factory set to customer specific value. \*\*Customer defined, set via Dips 1-6. Bit values shown for example only, see Address Setting below.

Data Field:

B<sub>0</sub> = LSB current measurement count byte  
B<sub>1</sub> = MSB current measurement count byte

B<sub>2</sub> = not used  
B<sub>3</sub> = not used

B<sub>4</sub> = error flag  
B<sub>5</sub> = error flag

B<sub>6</sub> = LSB velocity data byte  
B<sub>7</sub> = MSB velocity data byte

Current Measurement Count

The Current Measurement Count (CMC) is the output data that indicates the present position of the measuring cable. The CMC is a 12-bit value that occupies bytes B<sub>0</sub> and B<sub>1</sub> of the data field. B<sub>0</sub> is the LSB (least significant byte) and B<sub>1</sub> is the MSB (most significant byte).

The CMC starts at 0x006 with the measuring cable fully retracted and continues upward to the end of the stroke range stopping at 0xFE5. This holds true for all ranges.

Error Flags

0x00 (GREEN - ON, RED - OFF) indicates the sensor is operating within normal calibrated limits.

0x33, 0x55, 0xAA, 0xCC (RED or GREEN - FLASHING) indicates sensor is at or beyond its calibrated measurement range. Should any of these conditions occur within calibrated range, return unit to factory for evaluation or service.

Velocity

Data in bytes B<sub>7</sub> - B<sub>6</sub> is the change in the CMC (current measurement count) over a 100 msec time period. This data can then be used to calculate velocity in a post processing operation.

Velocity Calculation

$$\left( \frac{\text{count change} - 2047}{.1 \text{ sec. time period}} \right) \times \left( \frac{\text{full stroke range}}{4063} \right)$$

Sample Calculations

Cable Extension (positive direction):  
B<sub>7</sub>..B<sub>6</sub> = 0x8D3 (2259Dec), full stroke = 125 in.

$$\left( \frac{2259 - 2047}{.1 \text{ sec}} \right) \times \left( \frac{125 \text{ in.}}{4063} \right) = 65.22 \text{ in. / sec.}$$

Cable Retraction (negative direction):  
B<sub>7</sub>..B<sub>6</sub> = 0x7D0 (2000Dec), full stroke = 125 in.

$$\left( \frac{2000 - 2047}{.1 \text{ sec}} \right) \times \left( \frac{125 \text{ in.}}{4063} \right) = -14.46 \text{ in. / sec.}$$

Converting CMC to Linear Measurement

To convert the current measurement count to inches or millimeters, simply divide the count by 4061 (total counts over the range) and then multiply that value by the full stroke range:

$$\left( \frac{\text{CMC} - 6}{4063} \right) \times \text{full stroke range}$$

Sample Conversion:

If the full stroke range is 125 inches and the current position is 0x4FF (1279 Decimal) then,

$$\left( \frac{1279 - 6}{4061} \right) \times 125 = 39.2 \text{ inches}$$

I/O Format:

----------------	----------------	----------------	----------------	----------------	----------------	----------------	----------------

Current Measurement Count

The **Current Measurement Count (CMC)** is the output data that indicates the present position of the measuring cable. The CMC is a 12-bit value that occupies bytes **B<sub>0</sub>** and **B<sub>1</sub>** of the data field. **B<sub>0</sub>** is the **LSB** (least significant byte) and **B<sub>1</sub>** is the **MSB** (most significant byte).

The **CMC** starts at **0x008** with the measuring cable fully retracted and continues upward to the end of the stroke range stopping at **0xFE5**. This holds true for all ranges.

Converting CMC to Linear Measurement

To convert the current measurement count to inches or millimeters, simply divide the count by 4061 (total counts over the range) and then multiply that value by the full stroke range:

$$\left( \frac{\text{current measurement count}}{4061} \right) \times \text{full stroke range}$$

Sample Conversion:

If the full stroke range is **80 inches** and the current position is **0x4FF** (1279 Decimal) then,

$$\left( \frac{1279}{4061} \right) \times 80.00 \text{ inches} = 25.2 \text{ inches}$$

Error Flags

**0x00** (GREEN - ON, RED - OFF) indicates the sensor is operating within normal calibrated limits.

**0x33, 0x55, 0xAA, 0xCC** (RED or GREEN - FLASHING) indicates sensor is at or beyond it's calibrated measurement range. Should any of these conditions occur within calibrated range, return unit to factory for evaluation or service.

B <sub>7</sub>	B <sub>6</sub>	B <sub>5</sub>	B <sub>4</sub>	B <sub>3</sub>	B <sub>2</sub>	B <sub>1</sub>	B <sub>0</sub>
----------------	----------------	----------------	----------------	----------------	----------------	----------------	----------------

Velocity

Data in bytes **B<sub>7</sub>** - **B<sub>6</sub>** is the change in the **CMC** (current measurement count) over a 100 msec time period. This data can then be used to calculate velocity in a post processing operation.

Velocity Calculation

$$\left( \frac{\text{count change} - 2047}{.1 \text{ sec. time period}} \right) \times \left( \frac{\text{full stroke range}}{4061} \right)$$

Sample Calculations

Cable Extension (positive direction):

**B<sub>7</sub>..B<sub>6</sub> = 0x8D3** (2259Dec), full stroke = 80 in.

$$\left( \frac{2259 - 2047}{.1 \text{ sec}} \right) \times \left( \frac{80 \text{ in.}}{4061} \right) = 41.76 \text{ in. / sec.}$$

Cable Retraction (negative direction):

**B<sub>7</sub>..B<sub>6</sub> = 0x7D0** (2000Dec), full stroke = 80 in.

$$\left( \frac{2000 - 2047}{.1 \text{ sec}} \right) \times \left( \frac{80 \text{ in.}}{4061} \right) = -9.26 \text{ in. / sec.}$$

80-inch SGJ-80-4 w/ Mounting Bracket:

120-inch SGJ-120-4 w/ Mounting Bracket:

**Mounting Options:**

**Changing Measuring Cable Exit and Electrical Connector Direction:**

For the ultimate in flexibility, the measuring cable exit direction and the direction of the electrical connector can be rotated around in 90° increments to accommodate just about any installation requirement.

To change measuring cable exit direction, simply remove the 4 mounting bracket screws, rotate the bracket to desired position and replace the screws.

To change the direction of the electrical connector, remove the 4 sensor cover screws and carefully remove the sensor cover just far enough to separate the cover from the main body. Be careful of the three small gage wires that attach the internal controller board to the potentiometer.
